

Team Meeting on Current Project Status

Meeting Summary Report

Generated on December 15, 2025 at 04:27 PM

■ Meeting Overview

The meeting's overall purpose was to discuss the current status of the project, addressing various production issues, and outlining the plan to implement a new compliance requirement from the client. Major discussion themes included the recommendation engine API, batch processing job, frontend updates, mobile team progress, and QA testing. The team discussed data inconsistencies affecting the API, the need for a 30-minute batch processing interval, and the completion of several frontend features. However, the collaboration panel feature and real-time comment threads are pending due to staging environment issues and backend dependencies.

Key decisions and agreements included fixing the staging environment, updating the cron scheduler for the batch processing job, and planning for the implementation of a new compliance requirement for complete logging of user-triggered actions. The team acknowledged that this new requirement would be a significant effort, potentially becoming a full user story, and might not be feasible to complete in the current sprint. Important updates mentioned during the meeting included the discovery of design inconsistencies in the subscription management page, the need to upgrade to Xcode 15 for iOS development, and the identification of cross-team blockers such as staging reliability and the WebSocket channel for real-time comments.

The meeting also highlighted several risks and blockers, including the potential impact of logging every user action on storage, the need for a dedicated hour to fix the staging environment, and the risk of delaying the sprint due to the new compliance requirement. Additionally, the team discussed the importance of coordinating deployments and updating Jira with accurate time estimates and blockers to ensure a smooth project progression. Overall, the meeting aimed to align the team on the project's current status, outline the next steps, and manage expectations regarding the new compliance requirement and other pending tasks.

■ Task Assignments

Assigned To	Task	Deadline
■■■■■	■■■ ■■■ ■■■■■ ■■■■■■■■	■■■■ ■■■■

■ Task Dependencies

Person	Dependent Task	Depends On	Required Task	Reason
Arvind	Finish API	Sana	Correct dataset	Missing fields in dataset cause scoring to fail
Rajeev	Update cron scheduler	Meera	Confirm scheduling interval	Needs confirmation on 30-minute interval requirement
Kavya	Integrate WebSocket	Arvind	Deploy WebSocket server	WebSocket server deployment required for real-time comments
Kavya	Redeploy UI	Arvind	Fix staging indexing	Staging configuration issues cause design inconsistencies
Priya	Complete QA	Arvind	Fix staging indexing	Staging reliability required for regression testing
Arvind	Fix staging	None	-	High-priority task to resolve staging issues
Ajay	Upgrade Xcode	None	-	Mandatory upgrade due to Apple's requirements
Karan	Estimate storage	Arvind	Share schema draft	Needs schema definition to estimate storage requirements
Kavya	Implement event logger	Meera	Clarify compliance requirement	Needs confirmation on compliance logs requirement
Arvind	Create log endpoints	Meera	Clarify compliance requirement	Needs confirmation on compliance logs requirement
Priya	Verify event logs	Kavya, Arvind	Implement event logger and create log endpoints	Needs event logging implementation to verify logs

Note: Only explicit or clearly logical dependencies are included in the table.
