

Key decisions and updates from the meeting include:

Meeting Summary Report

Generated on December 15, 2025 at 08:47 AM

■ Meeting Overview

- The meeting was focused on discussing the current status of various projects, addressing blockers, and making key decisions to move forward. The team covered a wide range of topics, including the recommendation engine API, batch processing job, frontend updates, mobile team progress, QA status, and production issues. The meeting also touched on new compliance requirements from the client, which will require significant effort from the team to implement complete logging for all user-triggered actions.
- The major discussion themes centered around resolving current blockers, such as data inconsistencies, staging environment issues, and iOS build pipeline problems. The team also discussed the need for a centralized event logger, new endpoints for storing logs, and potential storage concerns. Additionally, the meeting addressed UI/UX deviations, design updates, and the importance of coordination for deployments.

Key decisions and updates from the meeting include:

- The recommendation engine API is blocked due to data inconsistencies, which are being addressed by the ML team
- The batch processing job is on track, with a decision to use 30-minute intervals as requested by the client
- Frontend updates are mostly complete, with pending work on the collaboration panel and real-time comment threads
- Mobile team is making progress, but faces issues with iOS build pipeline and needs to upgrade to Xcode 15
- QA has completed testing for some features, but faces blockers due to staging environment issues
- The team needs to implement complete logging for all user-triggered actions to meet new compliance requirements
- Storage concerns may arise from logging everything, and a separate storage bucket or optimized archival system may be needed
- The team will prioritize fixing staging environment issues and deploying the WebSocket server to unblock frontend work

■ Task Assignments

Assigned To	Task	Deadline
Ajay	Fix iOS build pipeline	Next week
Ajay	Implement event logging on mobile	Sprint 23
Arvind	Fix staging indexing	Today
Arvind	Finish API	Monday
Arvind	Create backend endpoints for logging	Sprint 23
Arvind	Deploy WebSocket server	After staging fix
Arvind	Draft schema for compliance logs	Tonight
Kavya	Integrate WebSocket for comments	After deployment
Kavya	Redeploy UI with fresh configs	After staging fix
Kavya	Implement event logging on frontend	Sprint 23
Karan	Estimate storage for compliance logs	After schema definition
Priya	Verify UI/UX deviations after staging fix	After staging fix
Priya	Test event logging	Sprint 23
Rajeev	Update batch processing job	This week
Sana	Document internal process for data exports	ASAP

■ Task Dependencies

Person	Dependent Task	Depends On	Required Task	Reason
Arvind	Finish API	Sana	Correct dataset	Missing fields in dataset cause scoring to fail
Rajeev	Update cron scheduler	Meera	Confirm scheduling interval	Needs confirmation on 30-minute interval requirement
Kavya	Integrate WebSocket	Arvind	Deploy WebSocket server	WebSocket server deployment required for real-time comments

Kavya	Redeploy UI	Arvind	Fix staging indexing	Staging configuration issues affect UI design consistency
Priya	Complete QA	Arvind	Fix staging indexing	Staging reliability necessary for QA completion
Ajay	Upgrade Xcode	-	-	Mandatory upgrade due to Apple's requirements, but no direct dependency on another person's task
Arvind	Fix staging	-	-	No direct dependency, but a prerequisite for other tasks
Kavya	Implement event logger	Meera	Clarify compliance requirement	Needs clarification on client's deadline and requirements
Arvind	Create log endpoints	Meera	Clarify compliance requirement	Needs clarification on client's deadline and requirements
Priya	Test event logs	Kavya, Arvind	Implement event logger, Create log endpoints	Event logging implementation required for testing

Note: Only explicit or clearly logical dependencies are included in the table.
