

Team Meeting for Project Updates

Meeting Summary Report

Generated on December 15, 2025 at 04:28 PM

■ Meeting Overview

The meeting was held to discuss the current status of various project components, including the recommendation engine API, batch processing job, frontend updates, and mobile app development. The team addressed several major discussion themes, including data inconsistencies affecting the recommendation engine API, the need for a 30-minute interval for batch processing, and the completion of various frontend features such as the dashboard widget revamp and subscription management page redesign. However, some features like the collaboration panel and real-time comment threads are pending due to staging environment issues and backend dependencies.

Key decisions and agreements included confirming the need for 30-minute intervals for batch processing, prioritizing the fix for staging environment issues, and planning for the implementation of a new compliance requirement for complete logging of user-triggered actions. The team also discussed important updates, risks, and blockers, such as the need to upgrade to Xcode 15 for iOS development, potential storage issues with the increased logging, and the requirement for a dedicated event logger on the frontend. Additionally, the team identified cross-team blockers, including the instability of the staging environment, which is affecting multiple components, and the need for better coordination for deployments to avoid config mismatches.

The meeting concluded with a plan to address the identified issues, including stabilizing the staging environment, implementing the new compliance requirement, and coordinating efforts to ensure smooth deployments. The team was tasked with updating Jira with accurate time estimates and blockers, and the meeting notes were to be sent out shortly after the meeting. Overall, the meeting aimed to align the team on the project's progress, identify and address potential roadblocks, and ensure that all components are moving forward in a coordinated manner.

■ Task Assignments

Assigned To	Task	Deadline
Ajay	Fix iOS build pipeline	Next week

Assigned To	Task	Deadline
Ajay	Implement event logging on mobile	Sprint 23 (tentative)
Arvind	Fix staging indexing	Today
Arvind	Finish API by Monday	Monday
Arvind	Create draft schema for compliance logs	Tonight
Arvind	Deploy WebSocket server	After staging fix
Kavya	Redeploy UI with fresh configs	After staging fix
Kavya	Implement event logging on frontend	Sprint 23 (tentative)
Karan	Estimate storage needs for compliance logs	After backend defines schema
Priya	Re-check UI/UX deviations after staging fix	After staging fix
Priya	Test event logging	Sprint 23 (tentative)
Rajeev	Update cron scheduler	ASAP
Rajeev	Implement batch processing job	No deadline specified
Sana	Document updated internal process	No deadline specified

■ Task Dependencies

Person	Dependent Task	Depends On	Required Task	Reason
Arvind	Finish API	Sana	Correct dataset	Needs corrected dataset to finish API

Person	Dependent Task	Depends On	Required Task	Reason
Rajeev	Update cron scheduler	Meera	Confirm scheduling interval	Needs confirmation of scheduling interval to update cron scheduler
Kavya	Integrate WebSocket	Arvind	Deploy WebSocket server	Needs WebSocket server deployed to integrate it
Kavya	Test comment threads	Arvind	Fix staging indexing	Needs staging indexing fixed to test comment threads
Priya	Complete QA	Arvind	Fix staging indexing	Needs staging indexing fixed to complete QA
Arvind	Fix staging	Meera	Allocate dedicated time	Needs dedicated time to fix staging
Ajay	Upgrade Xcode	Meera	Approve upgrade	Needs approval to upgrade Xcode
Kavya	Implement event logger	Arvind	Create backend endpoints	Needs backend endpoints created to implement event logger
Arvind	Create backend endpoints	Meera	Clarify client deadline	Needs client deadline clarification to prioritize task
Priya	Test event logs	Kavya	Implement event logger	Needs event logger implemented to test event logs
Ajay	Implement mobile event logging	Kavya	Implement event logger	Needs event logger implemented to implement mobile event logging

Note: Only explicit or clearly logical dependencies are included in the table.
