

Team Meeting on Current Project Status

Meeting Summary Report

Generated on December 15, 2025 at 06:58 PM

Meeting Overview

The meeting's overall purpose was to discuss the current status of the project, addressing various production issues, and outlining the plan to implement a new compliance requirement from the client. Major discussion themes included the recommendation engine API, batch processing job, frontend updates, mobile team progress, and QA testing. The team discussed data inconsistencies affecting the API, the need for a 30-minute batch processing interval, and the completion of several frontend features. However, the collaboration panel feature and real-time comment threads are pending due to staging environment issues and backend dependencies.

Key decisions and agreements included prioritizing the fix for the staging environment, upgrading Xcode for iOS development, and planning for the implementation of a new compliance requirement for complete logging of user-triggered actions. The team acknowledged that this new requirement would be a significant effort, potentially becoming a full user story, and might not be feasible to complete in the current sprint. Important updates mentioned include the discovery of design inconsistencies in the subscription management page, the need for a dedicated event logger, and potential storage issues with logging every user action.

The meeting also highlighted several risks and blockers, such as the unstable staging environment, iOS build pipeline issues, and the need for better coordination between teams for deployments. The team agreed to update Jira with accurate time estimates and blockers and to communicate changes in the sprint notes. Overall, the meeting aimed to align the team on the project's status, address current challenges, and plan for upcoming requirements and potential roadblocks.

Task Assignments

Assigned To	Task	Deadline
Ajay	Fix iOS build pipeline	Next week
Ajay	Implement event logging on mobile	Sprint 23
Arvind	Fix staging indexing	Today
Arvind	Complete API	Monday
Arvind	Create backend endpoints for logging	Sprint 23
Arvind	Deploy WebSocket server	After staging fix
Arvind	Draft schema for compliance logs	Tonight
Kavya	Integrate WebSocket for comments	After deployment
Kavya	Redeploy UI with fresh configs	After staging fix
Kavya	Implement event logging on frontend	Sprint 23
Karan	Estimate storage for compliance logs	After schema definition
Priya	Re-check UI/UX deviations	After staging stable
Priya	Test event logging	Sprint 23
Rajeev	Update cron scheduler	ASAP
Rajeev	Implement batch processing job	Ongoing
Sana	Correct dataset	Tomorrow afternoon

Task Dependencies

Person	Dependent Task	Depends On	Required Task	Reason
Arvind	Finish API	Sana	Correct dataset	Missing fields in dataset cause scoring to fail
Rajeev	Update cron scheduler	Meera	Confirm scheduling interval	Needs confirmation on 30-minute intervals
Kavya	Integrate WebSocket	Arvind	Deploy WebSocket server	WebSocket server deployment is pending
Kavya	Test comment threads	Arvind	Fix staging environment	Staging environment issues prevent proper testing
Priya	Complete QA	Kavya	Redeploy UI with fresh configs	Staging configuration issues cause design inconsistencies
Arvind	Fix staging	None	None	High-priority task to fix staging environment
Ajay	Upgrade Xcode	None	None	Mandatory upgrade due to Apple's requirements
Kavya	Implement event logger	Arvind	Create backend endpoints	Needs backend support for event logging
Arvind	Create backend endpoints	None	None	Required for event logging compliance
Priya	Test event logs	Kavya, Arvind	Implement event logger, Create backend endpoints	Event logging requires frontend and backend changes
Ajay	Implement mobile event logging	Kavya, Arvind	Implement event logger, Create backend endpoints	Mobile event logging depends on web event logging implementation

Note: Only explicit or clearly logical dependencies are included in the table.
